Dear Hiring Manager,

I am writing to express my strong interest in the temporary Data Quality Analyst position at APMG. As a Master of Science in Data Science student at the University of St. Thomas, my professional and academic journey has equipped me with the precise database management and data hygiene skills needed to improve the accuracy, consistency, and integrity of your CRM systems. Furthermore, residing locally in Saint Paul makes the hybrid structure ideal for attending initial training and occasional in-person review sessions.

My technical background and project management experience directly support the core responsibilities of this data quality role:

- **CRM & Salesforce Operations:** Equipped with my recent Salesforce Certified Tableau Desktop Foundations credential, I am highly capable of navigating CRM environments and handling your specific Salesforce requests related to record merges, data corrections, and constituent updates.
- **Data Cleanup & Deduplication:** During my Medicaid Churn Analysis for Hennepin County, I processed and analyzed a restricted dataset of over 350,000 demographic records. This role demanded high standards for data accuracy, which directly aligns with your need to evaluate duplicate records, resolve formatting issues, and standardize core constituent fields.
- **Database Management:** Through developing the "WeatherForge" ETL pipeline and architecting a Snowflake data warehouse from scratch, I have honed my ability to identify data inconsistencies, enforce business rules, and execute broad data cleanup activities.
- **Service Ethic & Communication:** My background as a mathematics tutor and Special Education Paraprofessional has instilled a strong service ethic and the ability to independently prioritize tasks while collaborating successfully with remote team members across different systems.

I am eager to bring my dedication to data governance and operational excellence to APMG. Thank you for your consideration, and I look forward to the opportunity to discuss how my analytical background can support your practice.

Sincerely,

Odin Lee
