Odin Lee

DATA SCIENCE GRADUATE STUDENT

Saint Paul, MN | (612)-300-2223 | odinlee.pro@gmail.com
linkedin.com/in/odinlee | github.com/odinleepro | Portfolio: odinleedata.com

Education

University of St. Thomas, MS Data Science St. Paul, MN | Sep 2024 – Dec 2026

- **GPA:** 4.0
- **Relevant Coursework:** Machine Learning, Data Lakes and Advanced Analytics, Data Analytics and Visualization, Cloud Computing

Augsburg University, BS Data Science Minneapolis, MN | Jan 2020 – May 2024

- **Minor:** Computer Science | **Dean's List:** 7 Semesters

Skills

Programming Languages: Python | SQL | R | Java
Data & Analytics Tools: Oracle SQL Developer | Snowflake | Tableau | Power BI | Jupyter Notebook | RStudio
Libraries & Frameworks: Scikit-learn | pandas | NumPy | dplyr | ggplot2 | Plotly | Shiny | Quarto
Platforms: AWS | GitHub | Docker
Certifications: Salesforce Certified Tableau Desktop Foundations

Projects

WeatherForge: Minnesota Severe Weather Risk Intelligence Mar 2026 – May 2026
Technologies Used: Python (Pandas, Shiny) | Parquet | Mathematical Modeling | Plotly

- Engineered a **Composite Risk Score** to calculate regional danger by weighting storm frequency, financial impact, and human casualties.
- Normalized historical risk metrics on a **per-capita basis** by interpolating Census population data from 1950-2020.
- Processed **35 GB** of raw NOAA data into compressed Parquet layers and performed **Pearson correlation analysis** to identify atmospheric drivers of storm frequency.

Machine Learning Fantasy Baseball Draft Engine Feb 2026 – Apr 2026
Technologies Used: Python (Scikit-Learn, Pandas) | R | Lasso Regression | K-Means

- Developed three **Lasso Regression** models achieving $R^2 \approx 1.0$ to reverse engineer custom league scoring systems and isolate **precise feature coefficients** for player evaluation.
- Engineered a mathematical **Value Over Replacement Player (VORP) engine** by establishing **statistical baselines** from historical matchup data and roster constraints.
- Applied **K-Means clustering** to partition the player pool into strategic tiers, enabling rapid identification of **high value draft targets** whose mathematical value outpaced public ADP.

Medicaid Churn Analysis – Hennepin County (Restricted Data) Jan 2024 – Apr 2024
Technologies Used: R | dplyr | ggplot2 | plotly

- Cleaned and analyzed a **350K+ record dataset across 25 variables**, resolving missing values and data inconsistencies.
- Identified **enrollment churn trends** and presented visual insights to county officials to support **data-driven resource allocation**.

Experience

Store Sales Specialist | REI June 2026 – Present

- Delivered exceptional service while communicating membership and financial product benefits.
- Managed high-volume transactions, complex inquiries, and omnichannel order fulfillment.

Mathematics Tutor | Mathnasium & Independent Jun 2021 - Aug 2022

- Communicated quantitative concepts to diverse audiences, ensuring accessibility across various skill levels.
- Adjusted instructional strategies in real-time to address individual learning needs and styles.
- Managed operations for independent tutoring, including client relationships and scheduling.
